

How Institutions Verify in the WIL Hub

1. Student Eligibility

- Institution admin logs in with their role.
- They see a list of students registered under their institution.
- For each student, they can set `eligibility_status` → provisional (still writing exams) or verified (completed coursework, WIL letter issued).
- This replaces the manual issuing of letters with a digital flag.

2. Company Postings

- When a company posts a WIL program, it enters the system as `posting_status = pending`.
- Institution admin reviews the posting for compliance (stipend rules, duration, relevance to program of study).
- If valid, they set `posting_status = approved`.
- This ensures only legitimate opportunities reach students.

3. Matches

- The system auto-matches students to postings based on skills and eligibility.
- Institution admin sees these matches and validates them.
- They update `match_status` → approved or rejected.
- This prevents unqualified students from being forwarded.

4. Placements

- Once a company selects a student, the placement record is created.
- Institution admin confirms start/end dates and updates `completion_status`.
- This feeds directly into graduation tracking.

5. Reports

- Institution admin generates reports tied to placements.
- These show graduation impact, compliance notes, and completion tracking.
- This is the same function they already do in WIL modules — but centralized.
