

## **MVP Workflow for WIL Hub**

### **1. Student Onboarding**

- Students create a profile with **CV, skills, availability**.
- Institution doesn't need to upload transcripts — they just mark students as **eligible** or **provisionally eligible**.
- Status field: eligibility\_status = provisional | verified.

### **2. Company Posting**

- Companies post WIL opportunities (slots, skills, duration).
- Institution validates postings for compliance (stipend rules, relevance to programs).
- Status field: posting\_status = pending | approved.

### **3. Matching**

- System auto-matches eligible students to approved postings.
- Institution reviews matches (light-touch validation, not full recruitment).
- Students get notified and can apply/express interest.

### **4. Selection**

- Companies shortlist and interview candidates.
- Final selection recorded in the system.
- Institution updates WIL module with placement details.

### **5. Tracking**

- Institution continues using its existing WIL module to track completion and graduation.
- Platform provides dashboards for:
  - Students (placement status).
  - Companies (student progress).
  - Institutions (graduation impact).

## **MVP Works**

- **Institutions:** No database merger, just a verification flag + compliance check.

- **Companies:** One hub for vetted candidates, less admin.
- **Students:** Trusted opportunities, no scattered applications.

This MVP is lean: it doesn't replace existing systems, it **extends them**. Institutions only do what they already do (verify + track), companies get a simple posting hub, and students get centralized access.
